I don't understand what happens when I switch chords at the LN Live Scale Selector.

Last Updated: Jan 15, 2015 10:11PM CET

This article talks about the function of the LN Live Scale Selector.

Quick Answer: The LN Live Scale Selector allows you to set a scale for playing with a QWERTY computer keyboard when NOT in mode *Play* (i.e. *Stop*).

Note: This feature has been (re)moved in version 1.5.3 of Liquid Notes. Only the *Current Scale* of your arrangement is shown in that window. The LN Live Scale Selector has been moved to *Settings > General*.

LN Live Scale Selector in Liquid Notes

At the bottom right of the Liquid Notes window the *LN Live Scale Selector* can be found. It has a double function: when a song is playing, the *Current Scale* of your arrangement at the position of the cursor (playback head) is shown. Any change in the scale of your song will be indicated there as soon as the cursor hits the chord introducing that scale change.

When not playing back a song, i.e. being in mode *Stop*, you may set any scale from a drop-down menu to 'improvise' with a QWERTY computer keyboard or MIDI device (e.g. keyboard) to hear the notes in this respective scale.

As soon as you hit *Play* only the *Current Scale* of your song will be shown again, and any input from the drop-down menu is disregarded.
